

SURGICAL PATHOLOGY REPORT FINAL

PATIENT	MRN	DOB	SEX
ROWAN, MAYA	MV000017	11/02/1966	F

Accession	S25-00341
Collected	01/04/2025 09:18
Received	01/04/2025 11:02
Specimen	Left breast, 10 o'clock, ultrasound-guided core biopsy
Ordering provider	Elena Morris, MD

CLINICAL HISTORY

59-year-old woman with left breast mass and suspicious liver lesions on staging imaging.

FINAL DIAGNOSIS

LEFT BREAST, 10 O'CLOCK, CORE BIOPSY: Invasive carcinoma of no special type (ductal), Nottingham grade 2. No definite lymphovascular invasion identified.

BREAST BIOMARKER STUDIES

TEST	RESULT	INTERPRETATION / DETAILS
ER	Positive	95% tumor nuclei; strong intensity
PR	Positive	20% tumor nuclei; moderate intensity
HER2 IHC	Negative (1+)	Faint/incomplete membrane staining; no overexpression

COMMENT

Morphologic and immunophenotypic findings support primary invasive breast carcinoma. Correlate with imaging and clinical staging.
