

Medical Oncology Follow-up Note

Note Status: Signed

Patient:	Maya Rowan	MRN:	MV000017
DOB:	11/02/1966	Encounter Date:	07/22/2025
Author:	Elena Morris, MD	Encounter:	Outpatient medical oncology

HISTORY OF PRESENT ILLNESS

Returns during cycle 6 of letrozole/ribociclib. She feels generally well with mild fatigue and no fever or infectious symptoms. CBC today shows neutropenia. Most recent CT continues to show controlled disease.

CURRENT CANCER THERAPY

- Letrozole 2.5 mg by mouth daily
- Ribociclib 600 mg by mouth daily, days 1-21 of each 28-day cycle - HOLD starting today

ASSESSMENT

Metastatic ER-positive/HER2-negative breast cancer with continued radiographic disease control. Grade 3 neutropenia attributed to ribociclib.

PLAN

1. Hold ribociclib for 7 days and repeat CBC.
2. Continue letrozole without interruption.
3. If ANC recovers, resume ribociclib at reduced dose of 400 mg daily, days 1-21 of each 28-day cycle.
4. Proceed with scheduled restaging CT.

ADDENDUM

07/29/2025: Repeat CBC reviewed with ANC recovery. Ribociclib resumed at 400 mg daily on days 1-21 of each 28-day cycle. Letrozole 2.5 mg daily continues without change.
